

Taura syndrome virus IRES initiates translation by binding its tRNA-mRNA-like structural element in the ribosomal decoding center

Tue, 2014-06-10 09:31 — niko

A competing story with similar results on a related IRES structure was published in *Cell* around the same time. This may highlight how arbitrary the decisions made by Nature editors really are. Our paper was submitted to Nature before the competing paper was submitted to *Cell*. In the light of this, comments by Reviewer #3 deserve special attention.
